Windows Server Backup : Installing Windows Server Backup

1- Open the Server Manager and click on Manage > Add Roles and Features.

2- Navigate to the Features section, selecting Windows Server Backup.

3- Click on Next, then Install.

Performing a System State Backup

1- Open Windows Server Backup from the Start Menu.
2- Click Local Backup.

3- In the Actions menu, click Backup Once...

4- In the Backup Options, select Different options, then click Next.

5- Choose Custom backup configuration and click Next.
6- Click Add Items, select System State, then click OK.
7- Choose a backup destination.
   a. For local storage Select Backup to a volume.
   b. For network storage Select Backup to a shared folder, then provide the

network path.

8- Click Next and confirm settings.

9- Click Backup and wait for the process to complete.

10- Once done, check the status in Windows Server Backup.
